Acknowledgement of Country

We acknowledge the Traditional Owners of Country throughout Australia and recognise their continuing connection to lands, waters and communities. We pay our respects to Aboriginal and Torres Strait Islander cultures; and to Elders past and present.

We are NAOS

Hands-On Investors: Active, long-term investors focused on compounding capital and growing dividends.

True Alignment: NAOS staff and related entities are among the largest investors across the NAOS LICs. Notably, Sebastian Evans does not own any equities outside the NAOS LICs, ensuring he is fully aligned with shareholders both as the Investment Manager and as a Director of each NAOS LIC.

Concentrated Structure: Generally, take large minority ownership positions (5-35%) in select businesses and assist these businesses in achieving their long-term goals.

Index Unaware: <1% of all investments form part of the S&P/ASX Small Ordinaries Index.

Portfolio Composition – Emerging Companies

The NAOS LICs provide exposure to profitable emerging companies with unique moats, often benefiting from structural industry changes together with strong shareholder alignment.

The Rising Wall of Uncertainty

Q3 FY26 was characterised by a renewed bout of downside share price volatility, underpinned by the following concerns:

- SaaSocalypse
- Rising Inflation
- Rising Interest Rates
- Middle East Conflict
- Falling Productivity & Worsening Federal Balance Sheet

SaaSocalypse Explained

- The rapid pace of Artificial Intelligence (AI) improvements has given cause for concern that AI will (at the very least) lead to demand degradation and loss of pricing power for many software businesses.
- Given that many software businesses were being valued based on their cash flows growing at a high rate into perpetuity, the downside sensitivity is significant.
- The effect across software businesses will not be uniform and, in certain cases, will provide a material net benefit.

AI Disruption Risk Is Not Uniform Across Software

SaaSocalypse vs A.I.

- As an interesting side note to the SaaSocalypse is the exponential growth in AI token usage in conjunction with the ever-increasing ability of AI to undertake challenging tasks.
- Will the ROI from the output continue to justify the cost profile? Are the costs and usage profiles associated with this sustainable?
- For businesses, can existing (and trusted) software partners provide the answer?

SaaSocalypse – What it Means for NAOS

- Data Ownership – SaaS (Software-as-a-Service) businesses that own or hold proprietary/sensitive data and are deeply embedded in customer workflows will be far less impacted by AI. Examples include: payment processors/billing engines, enterprise software providers to regulated industries, and ordering systems that connect directly to suppliers.
- Cost Efficiencies – AI is materially enhancing cost efficiency for software businesses, with the most immediate benefits evident in coding and customer support.
- Product Improvements & Time to Market – AI is reducing development bottlenecks, enabling software businesses to deliver new features, integrations and upgrades to customers more quickly.
- New Investment Opportunities – Recent valuation corrections have enabled us to gain initial exposure to select software businesses with attractive characteristics at more compelling valuations.

Middle East Conflict - Oil Price & Supply Volatility

- Since the start of the conflict, ~15-20% of the world's oil supply has been significantly restricted.
- This has seen a price increase in products that use crude oil as a main input, particularly diesel.
- Second-order effects are also numerous, with negative consequences related to fertiliser availability as well as that of helium, which has an important use case in the manufacturing of semiconductor chips.

Price Increases Since Start of Middle East Conflict (as at 3rd April 2026)

Source – CharlieBilello

Potential Implications for NAOS Investments

- **Activity Levels** – Businesses across numerous industries will seek to reduce short-term costs wherever possible, with examples such as deferring maintenance programs & capital expenditure decisions, limiting manufacturing and reducing travel, etc.
- **Project Costs** (especially if construction has commenced) – Costs where fuel is an input on any level will lead to cost increases, and we have seen this already across transport, building materials, mining, manufacturing and travel.
- **Defence Related** – Given the geopolitical environment, there could be delays associated with certain works within US and Australian Defence sites and delays in long-term project commitments.
- **Consumer Confidence** – Consumer confidence plummeted over the last quarter to 90.5 points (see following slide), and this will have negative implications for businesses associated with retail spending, etc.

Potential Implications for NAOS Investments

Middle East Conflict - Oil Price & Supply Volatility

Source – Jefferies Research

Rising Inflation & Interest Rates

- The domestic interest rate easing cycle was short-lived, lasting just 6 months, with interest-rate increases in February and March reversing roughly two-thirds of the earlier cuts.
- Some believe rates may increase by a further 75bps, which would imply a cash rate of 4.85%. This would be the highest level since the GFC in late 2008 (when the Reserve Bank was rapidly decreasing rates through 2008-2009).
- The stark difference is that public consumption is currently ~24% of total GDP compared to ~18% in 2008, highlighting the tough trading conditions for private enterprise.
- The risk remains that public demand continues to be supported by factors such as federal Defence spending and the Brisbane Olympics, which may keep interest rates elevated for the foreseeable future.

Rising Inflation & Interest Rates

Contributions to GDP Growth - Year Ended December 2025

Source – RBA

Potential Implications for NAOS Investments

- Structural Cost Inflation Becoming a Significant Headwind
 - Rental Increases – Businesses with large leasehold property portfolios will face continued rental increases above GDP growth, which will add pressure to margins.
 - Wages Increases – As per the above wage arrangements, we will also see wage inflation run above GDP growth for many businesses with minimal efficiency gains.
- Ability to Pass on Price Increases
 - Many businesses have already put through ~2-6% price increases, with more expected through CY26; how these are accepted by end customers is yet to be seen.
- Context is imperative as all of the above is occurring in an environment where revenue/demand is subdued in the short term.

Reasons for Long-Term Optimism

- Demand – The demand backdrop in the longer term remains constructive, especially in industries where a structural setup forces long-term revenue growth, e.g., housing supply shortages and healthcare with an ageing population.
- Valuations – FY26 earnings per share (EPS) growth for industrial businesses (ex-banks & REITs) is now just +3% with a price to earnings ratio (P/E) of ~18.7. FY27 expectations for EPS growth are just 6.9% against a P/E of 17.5. The EPS growth expectations have been revised down from 4.3% and 9.5% since November 2025.
- Balance Sheets – Across NAOS investee companies, just two have net debt positions, with the balance either net debt neutral or in a net cash position. This provides an excellent optionality for further inorganic and organic growth initiatives.
- Bearish Investor Sentiment & Positioning – Demand for equities has been minimal for an extended period of time (see chart on following slide), yet in our view, the number of quality listed businesses has never been lower due to consolidation, etc. and therefore, will create a valuation premium for those quality listed businesses that remain.

Capital Management Framework

Our capital management priorities

01	Strong balance sheet supported by disciplined liquidity and risk controls	Ensure the business has sufficient liquidity to operate in all operating environments
02	Reduce debt post the TasmaNet acquisition by internally generated cashflow	Reducing debt post TasmaNet remains a key management priority
03	Invest to maintain our competitive advantage	Continued investment in technology and service
04	Identify and pursue strategically relevant and accretive growth opportunities	Pursue M&A opportunities that are strategically aligned and <u>value accretive</u> for our shareholders
05	Dividend distributions to continue with capital to shareholders over the long term as the business scales	Continue dividends; consider other capital management options over the longer term

Looking Forward – Remainder of CY26

- The near-term outlook for revenue growth is more uncertain than it was in Q2 FY26.
- Businesses will be embarking on more radical initiatives to protect and grow margins.
- We continue to expect elevated levels of merger, acquisition and potential takeover activity, particularly as volatile market conditions create opportunities for strategic consolidation.
- Our largest investments remain catalyst-rich, with several company-specific events expected over the remainder of CY26 (as outlined on the following slide).
- Market volatility is expected to support a continued broadening of NAOS portfolios, providing opportunities to selectively acquire high-quality businesses at attractive valuations.

Dividend Reinvestment Plan

Each of the NAOS LICs run a Dividend Reinvestment Plan (DRP). The DRPs are a powerful way to enhance your investment by reinvesting some, or all, of your dividends into additional shares. Key features include:

- **Effortless Way to Increase Shareholdings** - shareholders can increase their shareholding by reinvesting dividends back into the Company for additional shares with little to no effort at all.
- **Cost-Free Investing** – shareholders do not need to pay brokerage or any additional fees for the purchase and/or administration of new shares issued through a DRP.
- **No Dilutionary Share Issues** - when shares are trading at a discount to NTA, DRP shares are purchased on-market to ensure this capital management activity is completed without any dilution for existing shareholders.
- **Compounding Returns:** Reinvested dividends grow your shareholding in the company over time, supporting long-term wealth creation.

For information on how to participate or to download a form, visit www.naos.com.au/DRP

NAOS Asset Management 1% Pledge

As a company, we commit to **Pledge 1%** of revenue, time and intellect to movements and missions that matter.

Each year NAOS donates 1% of its annual revenue to the charity partners listed to the side. Each charity supports a cause that we strongly believe in.

Our people have an incredible range of skills that can be a huge help to charities and community organisations. Each year, team members have the opportunity to take 2 days paid volunteer leave to lend a helping hand to an organisation of their choice.

NAOS sees the value in supporting young members of the investment community. We provide training and mentorship for one student each year.

Why Invest via a Listed Investment Company (LIC)?

We strongly believe LICs are a highly effective structure to give investors the highest quality exposure to specific asset classes, which in the case of NAOS is emerging businesses.

A Listed Investment Company structure:

- Allows the investment manager to build a concentrated portfolio of high-quality investments **without needing to worry about short-term liquidity requirements**.
- **Fund size is generally limited** to the upside, allowing investors to maintain a significant exposure to the underlying investments and not be diluted by new investors, which may occur in an open-ended fund.
- Enables a **smoother distribution profile** as profits can be retained, as opposed to managed funds which distribute all taxable income annually. Dividends from a LIC may also be fully franked.
- Can provide **access to a range of alternative asset classes** which may not be suited to an open-ended structure.

Reasons Not to Invest with NAOS

Our LICs are not for everyone. Some reasons why you may not choose to invest with NAOS include:

- Concentrated portfolios (0-15 investments & shareholdings often >20%)
- Long-term investment philosophy (5+ years)
- Focus on emerging companies (\$20 million - \$500 million market capitalisation)
- Benchmark unaware (no current NAOS investments are within the XSOAI)
- Industrial focus (no exposure to resources or very early-stage businesses)
- Smaller fund size (increases ability to gain a meaningful exposure to smaller businesses)
- ESG aware with a focus on positive impact
- LICs can often trade at discounts and premiums to their underlying net-asset backing
